

ESERA 2021

Fostering scientific citizenship
in an uncertain world

30 Aug - 3 Sep 2021

Organised by

University of Minho, Braga, Portugal

Encountering Students' Learning Difficulties in Electrics – Didactical Concept and Prototype of Augmented Reality-Toolkit

L. Lauer, M. Peschel, H. Javaheri, P. Lukowicz, A. Grünerbl, K. Altmeyer, S. Malone, R. Brünken

ESERA 2021

Fostering scientific citizenship
in an uncertain world

30 Aug - 3 Sep 2021

Organised by
University of Minho, Braga, Portugal

Welcome

Luisa Lauer

PhD Student, Scientific Researcher
Primary Education Research Group
Faculty of Natural Sciences and Technology
Saarland University, Germany

UNIVERSITÄT
DES
SAARLANDES

Workshop Goals

- ❖ Introduction to teaching and learning with Augmented Reality (AR)
- ❖ Demonstration of a didactically substantiated educational AR-technology for physics education
- ❖ Provision of insights into challenges and applicability of educational AR-technology for physics education

ESERA 2021

Fostering scientific citizenship
in an uncertain world

30 Aug - 3 Sep 2021

Organised by
University of Minho, Braga, Portugal

Outline

- Theoretical Background: Augmented Reality (AR) in Education
- Theoretical Background: Electrical Circuit Schematics
- Demonstration: AR-Toolkit for Electrical Circuit Schematics
- Outlook and Discussion: Applicability of the AR-Toolkit

UNIVERSITÄT
DES
SAARLANDES

Outline

- **Theoretical Background: Augmented Reality (AR) in Education**
- Theoretical Background: Electrical Circuit Schematics
- Demonstration: AR-Toolkit for Electrical Circuit Schematics
- Outlook and Discussion: Applicability of the AR-Toolkit

Augmented Reality (AR)

- Real world (initial channel of perception) is supplemented with virtual objects (Azuma, 2001; Milgram & Kishino, 1994)
- Real world and virtual objects can be perceived simultaneously in real-time (Carmigniani, 2011)
- AR is viewed as a concept for computer-generated environments (Silva et al., 2003)
- AR can enhance the perception of reality by providing supplementary information (Liu et al., 2007)

ESERA 2021

Fostering scientific citizenship
in an uncertain world

30 Aug - 3 Sep 2021

Organised by

AR in Education

- AR can promote the acquisition of knowledge and skills
(Arici et al., 2019; Garzón & Acevedo, 2019)
- AR can positively influence motivation and engagement
(Zhang et al., 2020)
- The use of AR can be hampered by technical difficulties
(Munoz-Cristobal et al., 2015)
- The use of AR in education requires further scientific research
(Akçayır & Akçayır, 2017)

UNIVERSITÄT
DES
SAARLANDES

AR in Physics Education

Developments and didactical research on AR in the field of electrics:

- **Real-time display of measured values in electric circuits** (Altmeyer et al., 2020; Kapp et al., 2019; Thees et al., 2020)
- **Visualization of electromagnetic field lines** (Abdusselam & Karal, 2020; Barma et al., 2015; Buesing & Cook, 2013) **and electrostatic charge** (Permana et al., 2019)
- **Visualization of the electrical potential alongside the circuit** (Weatherby et al. 2020)

Outline

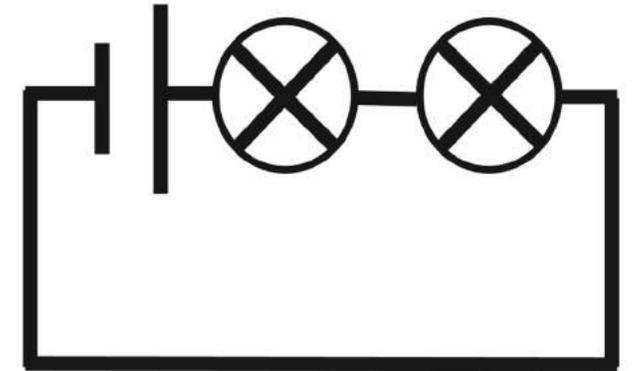

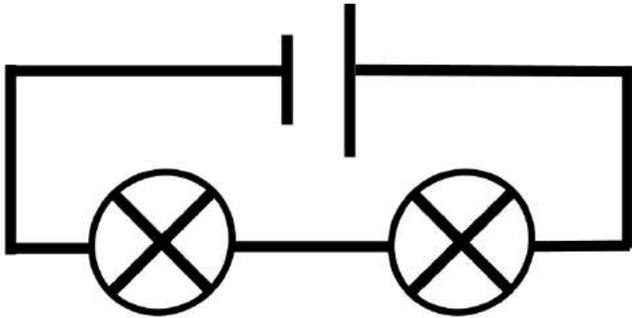

- Theoretical Background: Augmented Reality (AR) in Education
- **Theoretical Background: Electrical Circuit Schematics**
- Demonstration: AR-Toolkit for Electrical Circuit Schematics
- Outlook and Discussion: Applicability of the AR-Toolkit

Electrical Circuit Schematics

- Provision of a simple, structured symbolic representation of electrical circuits
- Difficulties of understanding and using electrical circuit schematics are:
(Wilhelm & Hopf, 2018)
 - Matching physical components with the corresponding symbol
 - Handling the discrepancy between spatial arrangement of the components and the simplified structure of the circuit schematic

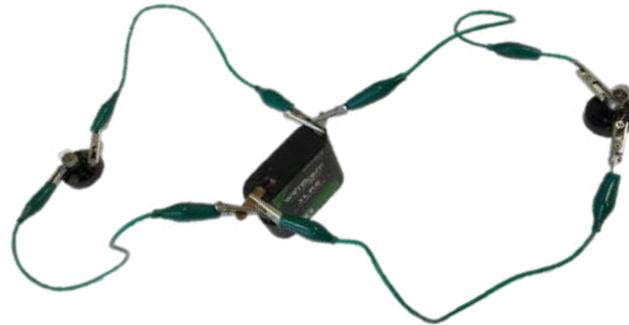

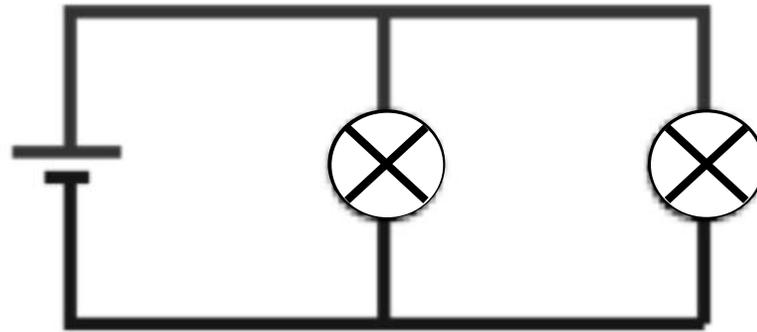

Electrical Circuit Schematics

Spatial arrangement of components, example 1:

Electrical Circuit Schematics

Spatial arrangement of components, example 2:

- Outlook and Discussion: Applicability of the AR-Toolkit

UNIVERSITÄT
DES
SAARLANDES

AR-Toolkit: Features

- Real-time visualization of electrical circuit symbols in spatial proximity to the components
- Real-time visualization of electrical circuit schematics in accordance to the components' semantic connection
- Use of the toolkit may facilitate the acquisition of representational competencies (concerning the matching of components and symbols and the matching of circuits and circuit schematics)
- Usable with either handheld AR-devices or head-mounted AR-devices

AR-Toolkit: Demonstration

UNIVERSITÄT
DES
SAARLANDES

Technical Improvement

- Detection and visualization of parallel circuits
- Addition of more components
- Reduction of box size, assimilation to the appearance of common electrical tools for education
- Optimization of AR-stability, minimization of reaction time

Outline

- Theoretical Background: Augmented Reality (AR) in Education
- Theoretical Background: Electrical Circuit Schematics
- Demonstration: AR-Toolkit for Electrical Circuit Schematics
- **Outlook and Discussion: Applicability of the AR-Toolkit**

ESERA 2021

Fostering scientific citizenship
in an uncertain world

30 Aug - 3 Sep 2021

Organised by
University of Minho, Braga, Portugal

Primary Education

- Introduction into electrical circuits and electrical circuit schematics
- Step-by-step-explanation of the assembly of an electrical circuit (schematic)
- Support for the process of abstraction from the actual circuit to the simplified circuit schematic

UNIVERSITÄT
DES
SAARLANDES

Secondary and higher education

- Support for the process of abstraction from the actual circuit to the simplified circuit schematic (early secondary education)
- Differentiation between serial and parallel circuits (early secondary education)
- Support for operating in highly complex electrical circuits (late secondary and higher education)

Discussion Summary

- Differences in use and applicability between the handheld device version and the head-mounted device version
- Prevailing flaws require further technical development
- Outlook: Empirical study is being carried out to assess the applicability of the toolkit for educational purposes

Take-Home

Take-Home

- AR in (physics) education can facilitate the acquisition of (representational) competencies by connecting real objects with additional information in real-time
- The presented AR-toolkit for real-time visualization of electrical circuit schematics represents a first-stage prototype of a didactically substantiated usecase for AR in physics education
- Further technical optimization is required to enable its use everyday education and training
